

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Currently amended) An electronic publishing system, comprising:

B1 a data collection interface for collecting user data from users of a plurality of websites,
wherein the user data is collected when a user subscribes to one of the plurality of websites;

a database for separately storing the collected user data for each website;

a publisher interface that allows a publisher for each website to create a message specification associated with the publisher's website, wherein the publisher interface includes:

a mechanism for selecting a template from a plurality of templates;

a mechanism for inputting information;

a mechanism for designating a recipient criteria;

a scheduling mechanism for establishing a delivery time; and

a message builder that accesses a server and generates a message for delivery to a targeted group of users of each website based on the message specification created by the publisher for each website.

2. (Original) The system of claim 1, wherein the user data includes demographic information.

3. (Original) The system of claim 2, wherein the message builder compares the recipient criteria designated by the publisher to the demographic information of the users to match the inputted segments of information with groups of users.

4. (Original) The system of claim 1, wherein the information comprises story content.

5. (Original) The system of claim 1, wherein the information comprises at least one advertisement.

6. (Original) The system of claim 1, wherein the message builder comprises:

a scheduler for grouping advertisements with story content and for determining specific users that will receive each message;

a formatter for generating the messages in the selected templates; and

a mailer for delivering the messages at the established delivery time.

7. (Original) The system of claim 1, wherein the user data collection queries used to collect the user data are pre-determined by the publisher of the associated website.

8. (Original) The system of claim 1, wherein the plurality of templates includes:

a calendar;

a newsletter; and

a map.

9. (Original) The system of claim 1, wherein each template is customizable.

10. (Original) The system of claim 1, wherein the publisher interface further includes a mechanism for choosing from a plurality of delivery modes.

11. (Original) The system of claim 10, wherein the plurality of delivery modes include electronic messaging, facsimile, and wireless communication.

12. (Original) The system of claim 1, further comprising a system for un-subscribing users, wherein un-subscribed users will not receive the message.

13. (Currently amended) A program product stored on a recordable media for electronically publishing information, comprising:

a system for separately storing user data collected from users of each of a plurality of websites, wherein the user data is collected when a user subscribes to one of the plurality of websites;

a publishing system, wherein the publishing system allows a publisher of each website to create a message specification associated with the publisher's website, including:

a system for inputting information;

a system for selecting a template from a plurality of templates in which the information will be displayed;

a system for designating a recipient criteria; and

a system for designating a time of delivery.

cont

14. (Original) The program product of claim 13, further comprising:

a system for determining specific website users to receive a message based on the recipient criteria designated by the publisher;

a system for displaying the message in the selected template; and

a system for delivering the message to the specific website users at the designated time of delivery.

15. (Original) The program product of claim 14, wherein the specific website users are determined when a match is established between the recipient criteria designated by the publishers and the stored user data.

16. (Original) The program product of claim 14, further comprising a system for customizing the templates.

17. (Currently amended) A computer system for electronically publishing information, comprising:

a processor;

a computer system memory;

an interface; and

a software product stored on the computer system memory and executable by the processor, wherein the software product comprises:

a system for separately storing user data collected from users of each of a plurality of websites, wherein the user data is collected when a user subscribes to one of the plurality of websites;

a publishing system, wherein the publishing system allows a publisher of each website to create a message specification associated with the publisher's website, and includes:

a system for inputting information;

a system for selecting a template from a plurality of templates;

a system for designating a recipient criteria; and

a system for designating a time of delivery.

18. (Original) The computer system of claim 17, wherein the software product further comprises:

a system for determining specific website users to receive a message based on the recipient criteria designated by the publisher;

a system for displaying the message in the selected template; and

a system for delivering the message to the specific website users at the designated time of delivery.

19. (Original) The program product of claim 18, wherein the specific website users are determined by matching the recipient criteria designated by the publishers to the stored user data.

20. (Original) The program product of claim 17, further comprising a system for customizing the templates.

21. (Currently amended) A method of electronically publishing information, comprising the following steps:

collecting user data from users of a plurality of websites with a user data collection interface, wherein the user data is collected when a user subscribes to one of the plurality of websites;

separately storing the user data for each website in a database;

providing a publisher interface system, wherein a plurality of publishers can create a message specification by:

inputting information, wherein the information includes story content and advertisements;

selecting a template from a plurality of templates;

designating a recipient criteria; and

designating a time for delivery.

B1
Cont
22. (Original) The method of claim 21, further comprising:

generating and delivering messages to the website users based on the message specification created by the publisher of the associated website.

23. (Original) The method of claim 22, wherein the step of generating and delivering comprises:

grouping the story content with the advertisements;

determining specific website users to receive the messages based on the designated recipient criteria;

generating the messages in the selected templates; and

delivering the messages to the specific website users at the designated time.

24. (Original) The method of claim 23, wherein the determining step comprises:

comparing the recipient criteria designated by the publishers to the user data collected from the website users; and

selecting specific website users when data collected from the website users matches the recipient criteria designated by the publisher.

25. (Original) The method of claim 21, further comprising customizing the selected template.

B1
Cont

26. (Currently amended) A method for electronically publishing information, comprising the following steps:

accessing a detail window to designate message details, including:

selecting a time for delivery for the information;

selecting a template from a plurality of templates;

accessing a news window to input the information and designate news details, including:

selecting a title for the information;

entering story content into a text box; and

selecting a target recipient criteria from demographic information collected from a group of possible recipients, wherein the demographic information is collected when a possible recipient subscribes to receive the electronically published information.

27. (Original) The method of claim 26, further comprising:

accessing a target window; and

creating a target recipient criteria by selecting at least one recipient characteristic.

28. (Original) The method of claim 27, further comprising:

accessing a second news window;

selecting a title for the information;

entering the desired information into a text box; and

selecting target recipient criteria for the information.

29. (Original) The method of claim 26, further comprising:

accessing an advertisement window; and

selecting advertisements to accompany the story content.
